VETERINARY RADIOLOGICAL CERTIFICATE

LUMBOSACRAL SPINE EVALUATION

RAD23081

Examination date: 4/11/2023

Patient: Gem Amethyst Auksinis Feniksas of Amberhall

Owner: MEC Beccaro

Breed: Rhodesian Ridgeback

Gender: Female

Microchip number: 900141000206381

DOB: 4/3/2022

Radiologic evaluation:

This is to certify that I examined lateral and VD lumbar, sacral and caudal vertebrae radiographs for the above dog.

There are incidental "kissing" transverse processes of L6 and L7 on the righthand side, which is not believed to be clinically relevant, but merely an incidental normal variant.

Based on the radiographs presented, the dog has no evidence of sacral osteochondrosis and has normal lumbar and sacral vertebrae with no evidence of transitional vertebrae.
